

Water consumption cut from 3 litres per cycle to 2.4L with no loss of wash quality on new Evolution pass-through models

New Evolution pass-through dishwashers from Maidaïd Halcyon deliver a 20% reduction in water usage with no loss of wash quality!

Evolution is a new design of premium quality dish and glasswasher that delivers the performance and build-quality of more expensive machines.

Water consumption per cycle has been cut from the industry standard 3 L per cycle to just 2.4 L. With an average 80 washes daily, the saving is 48 L per day – or 17,520 L per year. Detergent and energy required to heat the wash water are also reduced by 20%!!

Most importantly, wash quality has been maintained because Evolution dishwashers use a highly efficient direct water feed to both the upper and lower wash arms, unlike many conventional machines use a power sapping 'T' joint to split the flow.

Maidaïd-Halcyon has been at the forefront of the UK warewashing industry for 36 years, supplying more than 90,000 dish and glasswashers to the market. '**Evolution**' maximises scarce resources and meet the environmental challenge of the 21st Century with the very best green credentials!

Evolution dish and glasswashers are available from a nationwide network of distributors and supported with UK-wide representation.
